

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Previously Presented) A method of presenting data over a network comprising:
  - providing a persistent graphical object representing a rotating globe that depicts a plurality of geographical points and a plurality of geographical regions representative of geographical locations of a physical world;
  - extracting a plurality of content elements from at least one data file, at least one of the content elements conveying information related to at least one geographical location of the physical world;
  - superimposing the at least one content element on the graphical object at the geographical point or geographical region that is representative of the geographical location of the physical world to which the content element relates;
  - presenting said graphical object in a composition accessed by an initial application, said object having state and having one or more possible external connections;
  - allowing a user to indicate relocation of said graphical object to a location outside of said initial application; and
  - thereafter moving said graphical object to said outside location, preserving state of said graphical object.
2. (Original) The method according to claim 1 wherein said graphical object, once relocated, will persist and maintain state after termination of said initial application.
3. (Currently amended) The method according to claim 1 wherein said initial application location is ~~selected from the group consisting of~~ a web browser and said ~~composition is a web page; or~~ new location is a desktop provided by an operating system.

4. (Previously Presented) The method according to claim 1 wherein at least some of said content elements convey at least one of the following types of information:
  - one or more images indicating weather in various locations; and
  - one or more links indicating news stories related to a particular location displayed on said globe.
5. (Original) The method according to claim 1 wherein said relocation may be repeated from a current location to any number of additional platforms.
6. (Previously Presented) The method according to claim 3 wherein said desktop provided by an operating system is an interface of a platform, said platform selected from the group consisting of: a windows PC, a Macintosh PC, a Unix-type operating system, a set-top box, a wireless logic appliance, an internet appliance, a personal digital assistant, or another device connected to a network.
7. (Currently amended) The method according to claim 1 wherein said new location is selected from the group consisting of: a desktop provided by an operating system, ~~an application from the initial application~~, and a different computer platform with a different operating system.
8. (Original) The method according to claim 1 wherein said graphical object comprises:
  - one or more user interface components and wherein said components are preserved after a relocation; and
  - one or more connections to one or more external entities and wherein said connections are preserved after a relocation.
9. (Original) The method according to claim 1 wherein said allowing a user to indicate relocation comprises selecting and dragging a graphical object.

10. (Original) The method according to claim 1 wherein said allowing a user to indicate relocation comprises discontinuously selecting a graphical object and placing said object in a new location.

11. (Original) The method according to claim 8 wherein said one or more external entitles are selected from the group consisting of: web servers, other applications, background processes, and other remote processes.

12. (Currently Amended) A system presenting web content comprising:

[[a]] an information appliance displayable representation of a globe, where the globe is displayed using 3D software rendering and wherein the globe depicts a plurality of geographical points and a plurality of geographical regions representative of geographical locations of a physical world;

a logic module that projects web content onto the surface of said representation of [[a]] the globe by performing at least the following acts:

extracting wherein the logic module is configured to extract a plurality of content elements from at least one data file of a separate application, at least one of the content elements conveying information related to at least one geographical location of the physical world; and

superimposing wherein the logic module is configured to superimpose the at least one content element on the globe at the geographical point or geographical region that is representative of the geographical location of the physical world to which the content element relates[[:]] .

13. (Currently amended) A system according to claim 12 wherein said information appliance is configured to provide the representation of [[a]] the globe ~~can be accessed~~ through a web browser as embedded in a web page and can reside on an operating system desktop, ~~or can be executed as a stand-alone application in a window and wherein the same functionality is provided in any location.~~

14. (Currently amended) A system according to claim 12 ~~wherein web content is rendered~~ **further comprising means for rendering web content** on the globe as channels, wherein a channel is a set of related content from a content provider, an association of content providers, or a broker of web content, and wherein a content ~~items~~ **item** in a channel ~~have some~~ **has a** geographical distribution.

15. (Currently amended) A system according to claim 14 ~~wherein content items can be associated~~ **further comprising means for associating the content item** with points on said representation of ~~[[a]]~~ **the** globe or regions on said representation of ~~[[a]]~~ **the** globe.

16. (Currently amended) A system according to claim 14 ~~wherein when a cursor is moved over a content item~~ **means for providing** a textual window **that** will pop up that reveals details about ~~[[a]]~~ **the** content item **when a cursor is moved over the content item**.

17. (Currently amended) A system according to claim 14 ~~wherein active content items can have actions associated~~ **means for associating the content item with** actions ~~associated with them~~ that are triggered when a user selects ~~[[a]]~~ **the** content item.

18. (Currently amended) A system according to claim 17 wherein said actions are one or more selected from the group consisting of:

opening a web browser with a URL link as a parameter;  
 bringing content to the globe with a parameter the web address of content; **and**  
 initiation of communication to ~~another globevoii~~ **a GlobeVoii** user through email, chat, or sending an instant message;  
~~submitting an HTTP post that initiates or completes a web service associated with a channel provider, so as to book a flight with a travel agency and with the parameters being an IP address and post data.~~

19. (Currently amended) A system according to claim 14 ~~wherein channels are defined~~ **further comprising means for defining channels** using XL format ~~and describ~~

**describing** content at least in terms of geographic position, click-action, and parameters for click action.

20. (Currently amended) A system according to claim 19 wherein channels ~~may have reference to~~ Envooi sub-compositions ~~to be~~ **configured to be** added dynamically to a GlobeVoii application ~~so as to provide a unique interface and behavior for a given channel and wherein these references are used to retrieve the Envooi sub compositions from a web server.~~

21. (Currently amended) A system according to claim 14 ~~wherein channels are licensed~~ **comprising means for licensing channels** to channel providers on a ~~pay per channel; pay per end user; or~~ **pay per channel, pay per end user, or** a pay per user action basis.

22. (Currently amended) A system according to claim 14 wherein a texture map rendered on said representation of ~~a Globe~~ **the globe** is part of a separate 2D rendering system, said 2D rendering system comprising a local display managing system for managing repainting damages.

23. (Currently amended) A system according to claim 14 wherein a representation of ~~[[a]] the globe displays~~ **is configured to display** real time daylight illumination of ~~[[the]] Earth~~ using 3D shading ~~with the lighting source being the correct relative position of the sun to the Earth.~~
